Assumptions:
 In India, tax rate on STCG and speculative income is different. It is assumed that each trade contributes to overall income. Hence, tax implications has been adjusted even if the Payoff Diagram indicates negative net income.
 It is assumed that position is squared-off everytime. In reality, that may not be the case. Cash positions might be carried forward.
 Special charges in case of ASSIGNMENTS have not been considered. Brokerage is assumed to be at FLAT Rate for option trades.

What to do when covered call expire ITM?
